

Data Protection & IT Security as a Security Awareness Package

A regular and effective training program focused on data protection, IT security, and the AI Act/AI literacy. It helps your employees recognize phishing emails, malware, and other cyber threats early on and respond to them appropriately. In addition, they receive practical tips on how to proceed and how to address potential vulnerabilities.

Your Situation

On the one hand, you want to be able to see at the push of a button who has already completed the annual data protection training - but you don't want to have to organize one in-person training session after another every year.

Our Package: Vendor-Neutral Courses

- ➔ Data Protection & IT Security
- ➔ European AI Act / Use of Prompts
- ➔ Escape Room: IT Security

Your benefits at a glance

- Completion of the annual data protection training.
- Learn whenever and wherever you like.
- An overview of vulnerabilities, including specific recommendations for action – tailored to your corporate identity – hosted on German servers.
- Compliance with the obligation to provide training on the use of AI within the organization.
- Fun learning through gamification.

Requirements & Prices

- A learning management system (LMS)** is required to use these SCORM courses:
- Option 1** – You already have an LMS that can process SCORM packages: no action required.
- Option 2** – A subscription-based LMS, depending on the number of users you have.

PRICING MODEL 1

Use of the three content packages listed only – you already have an LMS in place.

€0.50 per user per month / minimum of 101 users
Price example for 200 users: €1,200.00 per year

PRICING MODEL 2

Use of the 3 content packages + provision of an LMS on a subscription basis.

€1.75 per user per month, minimum 101 users
Price example for 200 users: €4,200.00 per year
