360° infrastructure.

Your IT can run in our data centre with Infrastructure as a Service (IaaS). With Infrastructure as a Service (IaaS), we provide you with a complete IT infrastructure such as storage, hardware, and server and network components in our data centre.

You rent the infrastructure you need and access these services via broadband networks while Bechtle takes care of hosting, operations, and maintenance. You also have the option to let us oversee your existing infrastructure in our data centre.

▌Complete IT environment with server, storage, backup, and network capacities
▌Adaptive IaaS services as a modular system
▌Additional capacity can be procured at any time
▌Outsourcing service without hardware investments
▌Highly-standardised services have cost benefits
▌No investment in your own data centre
▌No investment in costly fallback capacities
▌Budgetable and transparent IT costs
▌Invoicing of deployed infrastructure services is based on use and you keep control of the operating system and applications

A complete infrastructure for your IT systems as a service from our Swiss data centres. From firewall to backup, we offer the perfect balance of functionality and performance. You benefit from maximum security and transparent costs per system.
