Network as a Service

Secure, AI-Native, managed mobility and Enterprise networking at a predictable monthly cost

Network as a Service (NaaS) offers organisations a modern alternative to traditional in-house managed networks by delivering networking infrastructure and services through a subscription-based model. Instead of investing heavily in hardware, maintenance, and specialist staff, organisations can shift to a predictable operational cost model while accessing scalable, cloud-based networking capabilities.

NaaS enables rapid deployment, supports hybrid and remote workforces, and allows businesses to scale bandwidth and services on demand. It also reduces the operational burden on internal IT teams, freeing them to focus on strategic initiatives rather than routine maintenance and troubleshooting.

Security and performance are typically enhanced through built-in protections, continuous monitoring, automated updates, and service level agreements (SLAs) that guarantee uptime and reliability. Additionally, NaaS aligns well with cloud-first and digital transformation strategies by integrating seamlessly with SaaS and multi-cloud environments.

For organisations seeking agility, cost predictability, and reduced complexity, NaaS presents a flexible and future-ready networking solution.

Network as a Service - The timing is right.

With the move to more flexible pay as you go cloud-based services, you can get:

- Peace of mind by lowering your risk of business disruptions and time to problem resolution.
- Better quality of service for critical business applications that rely on network performance and connectivity and are crucial for the continuity of your business operations.
- Time and resources back to focus on core competencies and business outcomes that are critical for your growth while also reducing your operational costs.
- A consumption model that provides flexibility and predictability.
- A way to keep pace as your business needs change.

We can simplify your network operations using an AI-native, cloud based network management platform, zero-touch setup, centralised management of APs, switches & SD-WAN gateways, historical data reporting, PCI compliance, monitoring and troubleshooting.

Network Overview and Reporting

Using a single dashboard, we can monitor and observe trends on your network. This allows for faster reactive support by quickly isolating problems through simple workflows, granular detail and extensive search. Network management data is securely stored to create reports containing historical data which can be provided as needed.

Simplified Provisioning

We can simplify network set up and offload IT resources by directly shipping APs, Switches & SDWAN Gateways to your sites where a nontechnical person can simply unpack, power up and they would then receive their configuration automatically over the Internet.

Maintenance and Firmware

We streamline and automate your network management while maintaining complete control of fully tested updates. AI recommendations can be implemented quickly ensuring optimal service and continuous improvement. Delivering the right responses, at the right time, by leveraging the right quantity and quality of data.

Flexible and Simple Payment Process

Take the simplicity of our Network as a Service solution even further. You can choose your preferred configuration of infrastructure, software and services. Complete a short, easy agreement and pay a predictable monthly subscription fee for a complete solution. Avoid the hassle of ownership. You choose the term and at the end, return it and subscribe to a new solution.

A Customer's Story

In Spring 2022, London's music lovers rejoiced as the iconic KOKO reopened its doors. Creating a monumental venue like KOKO involves huge financial commitments. The team wanted an IT partner that could deliver impactful results and Network as a Service (NaaS) was exactly what KOKO needed. A modern, pay-as-you-go model, it eases pressure and frees up cash flow at a crunch time. What's more, you simplify network set-up and management, pre-empt and auto-fix issues and stay one step ahead of advancing technology.

As part of a 5-Year NaaS plan KOKO has underpinned its experiences with a network that is smart, secure, and scalable and they have round the-clock support from our experts if ever they need it. All without any capital expenditure.
