Bechtle Public Belgium

Cybersecurity.

Digitisation is leading to large amounts of data, which must be managed professionally and securely.

Cybersecurity.

No digitalization in the public sector without a plan for digital security.

Digitalization is high on the agenda in the public sector. As a citizen, you want quick, professional access to the services of the various government authorities. Whether you are filling in your tax form or requesting a document, you expect to be assisted quickly and correctly from your PC or smartphone. Bechtle offers customized services in the field of cybersecurity to enable digitalization in the public sector. In your organization, now more than ever, you need the knowledge to anticipate data breaches or cyberattacks with malware, to name but a few common types of cybercrime. Bechtle has more than twenty years' experience in customized IT solutions for the public sector, and network security solutions are increasingly a cornerstone of our services. A Security Assessment by Bechtle provides a clear, comprehensible overview of your organization's situation.

Governments must manage large amounts of data securely.

Increasing digitalization produces mountains of data, which must be managed professionally and securely. This is essential, because data and sensitive information are exactly what hackers and cybercriminals are hunting for. Although it is a taboo subject, many boards have already faced a situation where they had to pay a ransom to recover data. Even if an organization pays that ransom, there is no guarantee it will get its data back intact. and training.

Bechtle provides reliable, unique digital security plan Governments are therefore compelled to store data securely and protect the storage location. But how should a government agency approach this? At Bechtle we have the answer to this question, and we assist you with assessments, solutions and personalized security training. We help you draw up a digital security plan and advise you on IT infrastructure, IT processes and IT security training.

Bechtle security assessment:
a first step towards cybersecurity.

At Bechtle we assess and improve the quality of your IT systems based on a Security Assessment. This involves conducting an audit, during which we identify any vulnerabilities determine whether it is possible to access sensitive data. We do this in two different zones: the internal and external IT environments. We then analyse this threat intel as the basis for choices and recommendations that will enable the teams within your organization to digitalize and innovate.

Fixed price and clear, understandable language.
Recommendations and conduct of a Security Assessment are always done for a fixed, clearly defined price. So you know exactly where you stand, without any fuss or complex price quotations. Moreover, we guarantee that everyone responsible for IT and its security will understand the report in its entirety.

The right tailored services for data centres or cloud solutions. Whether the data is in a data centre or in the cloud, we at Bechtle always provide the right services, tailored to your needs. Storage in the cloud, for example, requires special attention. After all, working with government and administrative data in the cloud demands the highest security standards.
Bechtle operates independently from vendors and has a large network of partners. As a result, we offer both standard products and specialized solutions for digital security in the public sector.

Security and data protection
training courses.

At Bechtle we not only help you with technical aspects. At your request, as a member of the organization's management, we also offer training in internet security and data protection. It is hardly possible to overstate the importance of this, because as a human being you are still one of the most essential links in a digital security system. Knowing how to respond when you receive a suspicious e-mail and having a clear policy with procedures are essential parts of IT policy. We are happy to help you by providing specific advice and services.

In summary, Bechtle stands for the following principles in its approach to cybersecurity:

I Prevention is better than cure. A well thought-out, secure IT infrastructure combined with well-trained employees and specific IT profiles for internet security are good assurance for secure data storage. Consider, for instance, the appointment of a Chief Information Security Officer.

I 24/7 detection of problems. With a Security Operation Centre you protect your data in the cloud or in the data centre. You can choose to run this department yourself or outsource it.

I Response. If, despite all measures, a cyberattack or data leak occurs, Bechtle's task forces and crisis teams will help you solve the problem.

What does IT security entail?

Cybersecurity is the practice of protecting critical systems and sensitive information from digital attacks. This means that the various components of the IT infrastructure are properly secured and also that employees know how to adequately mitigate the risks.

Bechtle Public Belgium.
IT solutions for the Public Sector.

Benefit from our more than 20 years of experience in the Belgian public sector and let our knowledge of projects throughout Europe work to your advantage. Bechtle is a reliable IT-partner and will guide you through the entire process.

Let our reliable network of specialists and suppliers form the basis for your performance. You can rely on us - from workstations to complete network infra-structure, from office applications to security man-agement. Together, and step by step, we can turn your digitisation project into a success story.
