

Copilot Activation & Adoption Workshop.

Join us on a journey to successfully introduce Copilot for Microsoft 365, Copilot Chat, and agents in your organization. Together we will support you from technical deployment and the implementation of security and governance policies to training your users and creating a sustainable adoption roadmap. This ensures a successful rollout and the long-term value of Copilot.

The workshop offers a hands-on approach: from technical integration through governance & security to change management activities. In this way we create the foundation for productive use of Copilot and ensure that your team is optimally prepared for AI-powered ways of working.

What is the content of the Workshop?

In the workshop we deploy Copilot in your Microsoft 365 environment, develop and implement security and governance policies, and support the rollout of Copilot Chat. We also identify initial agent scenarios, train your users, and create a tailored adoption and enablement roadmap.

What value do we provide?

- **Holistic approach** – everything from technology and governance to adoption, all from a single source.
- **Governance & Security** – clear rules and controls for the responsible use of AI.
- **Hands-on scenarios** – experience Copilot & agents in realistic use cases.
- **Change Management** – sustainable integration into your organization.
- **Microsoft-Funding** – in certain cases costs can be reduced through Microsoft's Copilot+ Deployment Accelerator program. Availability is checked individually in advance.

What is the benefit?

- Clear roadmap for Copilot deployment and usage
- Strategic and technical foundation for AI-powered ways of working
- Increased user adoption and productive use
- Strengthening of security, governance, and compliance
- Optional cost reduction through Microsoft funding (if available)
